

Manar Attar

AI & Data Scientist | Address: Amstelveen | Phone: 0657368339
Email: manarattar77@gmail.com | LinkedIn: www.linkedin.com/in/manar-attar

ABOUT ME

Artificial Intelligence graduate with a background in data science. I aim to utilize my analytical skills to develop innovative solutions for complex data challenges. My goal is to optimize decision-making, enhance operational efficiency, and create an impact within organizations through tech solutions.

WORK EXPERIENCE

Vervai | AI Consultant

April 2024 - Present

- Designed and implemented AI solutions, focusing on practical applications and innovation.
- Organized and led AI workshops and training sessions to bridge the gap between theory and practice.

Daffee | Innovation Consultant

Jun 2024 - Sep 2025

- Created role-specific GPT assistants to enhance productivity and decision making.
- Built semi-automated workflows in marketing, sales, and operations to reduce manual tasks.

EDUCATION

Masters in language and AI

Sep 2025 - Present

Vrije Universiteit Amsterdam

- Strong foundation in natural language processing, and AI-driven language modeling and Data annotation & labeling.
- Expertise in text analytics and large language models (LLMs), applying advanced machine learning techniques to extract meaningful insights and linguistic patterns from textual data.

Amsterdam Startup Launch Program

Sep 2024 - Jan 2025

Vrije Universiteit Amsterdam

- Participated in an intensive entrepreneurship program focused on developing and validating innovative business concepts using the Business Model Canvas.

Bachelor of Artificial Intelligence

Sep 2020 - Aug 2023

Vrije Universiteit Amsterdam

- Solid foundation AI concepts, machine learning, statistical methods, probability theory, and hypothesis testing.
- Minor in Data Science, Expertise in text analysis and natural language processing, focusing on extracting insights from unstructured data using machine learning.

EXTRA INFORMATION

- Technical Skills:** Python, SQL, JavaScript, HTML, CSS, FastAPI, Flask, MATLAB, R, Firebase, GitHub, Data preparation, Data visualization, API integration, Pandas, NumPy, Matplotlib, Seaborn, Excel.
- Soft Skills:** Academic research, teamwork, critical thinking.
- Languages:** English(Fluent), Dutch(Advanced-B2), Arabic(Fluent).
- Hobbies:** Travel, walks, football, meeting new people.

PROJECTS

SwipeEat: Adaptive Meal Recommendation System with Swiping Interface

- Implemented a preference based recommendation algorithm that matches users with meals.
- Designed and built an intuitive swipe-driven UI, deployed the system as a lightweight mobile web app.

Result: Demo product and MPV under production.

Skills: Python, JavaScript, HTML, CSS, Flask.

LINKED4RESILIENCE: Geo-Data Integration for Crisis Response

- Built data pipelines for cleaning, processing, and visualizing geo-annotated crisis datasets.
- Used Linked Data methodologies and implemented an algorithm for data unification and integration.

Result: Publication of a paper at ACM SIGSPATIAL, focusing on crisis response and resilience planning.

Skills: Python, RDF, Ontology, LinkedData, SPARQL, GitHub, Geodata, datavisualization.

Human Language Technology: Emotion and Sentiment Analysis

- Developed and evaluated sentiment and emotion classification models using baseline methods and optimized SVMs on large-scale conversational and social media text data.
- Applied text-mining and NLP techniques, including TF-IDF feature engineering and error analysis, to study performance trade-offs under class imbalance.

Result: Achieved competitive emotion classification performance, demonstrating precision-recall trade-offs in imbalanced datasets.

Skills: Python, NLP, data labeling, Text Mining, Machine Learning, SVM, Sentiment & Emotion Analysis.

Text-Mining: Sentiment analysis for world Cup twitter data

- Investigated sentiment analysis through both conventional machine learning and rule-based approaches.
- Implemented text-mining techniques including topic classification and named entity recognition to extract semantic and affective patterns from unstructured text.

Result: Development of a sentiment analysis framework to enhance natural language processing workflows.

Skills: Machine Learning, (NLP), Text Mining, Sentiment Analysis, Topic Classification, Named Entity Recognition.

Predicting annual income: Duplication vs. synthetic data

- Conducted data distribution analyses and identified significant class imbalance in the dataset.
- Implemented and evaluated oversampling strategies, including random duplication of minority classes and synthetic data generation (e.g., SMOTE).

Result: Improved accuracy and robustness of predictive models for income estimation.

Skills: Machine learning, data cleaning, data processing, data visualization.

Cooking Assistant: Conversational Bot for Recipe Guidance

- Contributed to the design and implementation of a conversational agent delivering step-by-step cooking instructions.

Result: Developed an intuitive and accessible cooking assistant enhancing user interaction in practical kitchen scenarios.

Skills: Conversational AI, Natural Language Processing, Dialogue Systems.
